

Capture a patient's self-assessment of their care and health

Clariti Health's Outcomes

allows providers to evaluate the effectiveness of their care by collecting patient-reported outcomes over a period of time. By capturing this invaluable data, providers are able to benchmark performance, improve care, and enhance the patient experience.

As the healthcare industry continues to move towards a value-based model for reimbursement of care, providers are able to use the data collected by *Outcomes* to quantify their value to meet these new standards. Leading providers are taking action now to get ahead of the curve, and are incorporating patient reported outcomes as part of their standard practice.

With *Outcomes* providers are able to affordably add patient reported outcomes to their standard practice. While our *Outcomes* questionnaires are based on industry standard templates, they can also be customized to meet individual organization and provider requirements. Questionnaires may be tied to specific clinical pathways and administered over time to fully understand changing quality of life, pain, mobility and other important indicators.

All Clariti's software products are cloud-based, requiring no additional hardware or software. Most facilities can be up and running in a couple of days, with minimal staff training time because of our simple and intuitive user interface.

Benefits:

- Understand what's succeeding and needs improvement
- Integrate patient reported outcomes measurement into your standard practice
- Maximize compliance and reimbursement
- Benchmark performance locally and nationally

Clariti Outcomes Includes:

- Standardized and custom questionnaires
- Provider dashboard and analytics
- On-demand access to your data at any time
- Connects with Clariti's Impact financial acceleration patient estimation platform

How Outcomes Works

- 1 Clariti manages the study content and delivery schedule for your various studies and surveys
- 2 We reach out to the patients to electronically deliver your studies
- 3 Clariti collects, aggregates, and compiles all patient feedback
- 4 We notify you of any alerts or information requiring more immediate attention per your preferences
- 5 Our dashboards and reports provide you with the information you need to make informed decisions and refer the information to any registries you are submitting data to
